- Snoring
- Obstructive Sleep Apnoea
- TMJ
- Bruxism
- Orthodontic retention

Additional Message:

I'm happy for these details to be passed on to my local Somnowell Practitioner

**The Somnowell is the world's first 4th generation oral device for snoring and sleep apnoea**

**Made from cast chrome cobalt alloy, second only to gold for long-term use in the mouth, the Somnowell is extremely small, comfortable, and discreet.**

**As seen on**

# **BBC1 Goodnight Britain**

In the show Chris tried a plastic oral device but found it too uncomfortable to wear and it kept coming in and out. In his words it was "absolutely horrible", "feels like a tennis ball in the mouth", "feel like going to suffocate".

Chris then gets a Somnowell and reports "as easy at that (when puts in). Its not uncomfortable, fits perfectly, its been designed for my particular mouth, and I'd wholly recommend them to everyone. It makes a big difference on our whole lives basically, actually waking up feeling really good, Charlie feeling pretty good as well, and actually smiling".
